

Requirement Engineering
<b>Inception:</b> We Understand the problem and find the solution. We Understand the nature and scope of problem
<b>Elicitation:</b> We remove the unnecessary details in the inception data. We define boundries of system
<b>Elaboration:</b> We refine, modify, elaborate, and give proper formate to data of inception and elicitation. That is Refined Requirement Modal.
<b>Negotiation:</b> We negotiate with the client for what is needed and what is to be eliminated. We try to create win-win situation in given budget and time.
<b>Specification:</b> Here we talk about simple specifications (also known as requirement specifications) because we currently we are talking with user/customer/stackholder/client. A simple specification document is submitted to the customer in a language that he/she will understand.
<b>Validation:</b> We validate that are these requirements are even practically possible to develop?
<b>Requirement Management:</b> We monitor, track, manage and control the requirements.
